

Now Available also for dual output LDO.
RICOH offers four types of product line-up.

RICOH 150mA dual output LDO features greater variation now with the auto, manual and seamless mode-shift selections.

Dual output 150mA LDO Regulator R5323x/R5325x/R5326x/R5328K Series

- Adjust different needs of different system status , active or standby.

for a system in active

Fast Response, High Ripple Rejection

Meet demands of system status with a single chip.

Manual ECO

for a system in standby

Low Supply Current

- Can get into "ECO-mode" easily but occupied an I/O port.

In using couples of LDOs, it may cause shortage of I/O ports.

Shift LDO-mode without control pins.

Automatic ECO

- Much less supply current with fine controlled LDO.

Proportionate LDO supply current to load current.

Nonstep mode shift.

Seamless

*Seamless : no seam of the mode
