## 11V Input 150mA LDO

---

NO.EA-256-170426

### OUTLINE

The RP173x Series are CMOS-based voltage regulator ICs featuring 150 mA output and low supply current of Typ.2.0 $\mu$ A. Each of these ICs consists of a voltage reference unit, an error amplifier, a resistor-net for voltage setting, a current limit circuit, a chip enable circuit and a Reverse Current Protection Circuit. RP173x Series are suitable for the power source such as the equipment being in the standby-mode. A version with /CE input pin has reduced CE pull-up resistance to make its supply current ultra low.

The RP173x Series have Max.11V Input voltage and are applicable to the portable communication equipment that require the 2-cell Li-ion battery. Also they are applicable to the non-portable communication equipments. As this series includes Reverse Current Protection Circuit, there is little leakage current, if it's used as back-up circuit.

Since the packages for these ICs are the SOT-23-5 package, SC-88A, or DFN(PLP)1010-4 of 1mm square, high density mounting of the ICs on boards is possible.

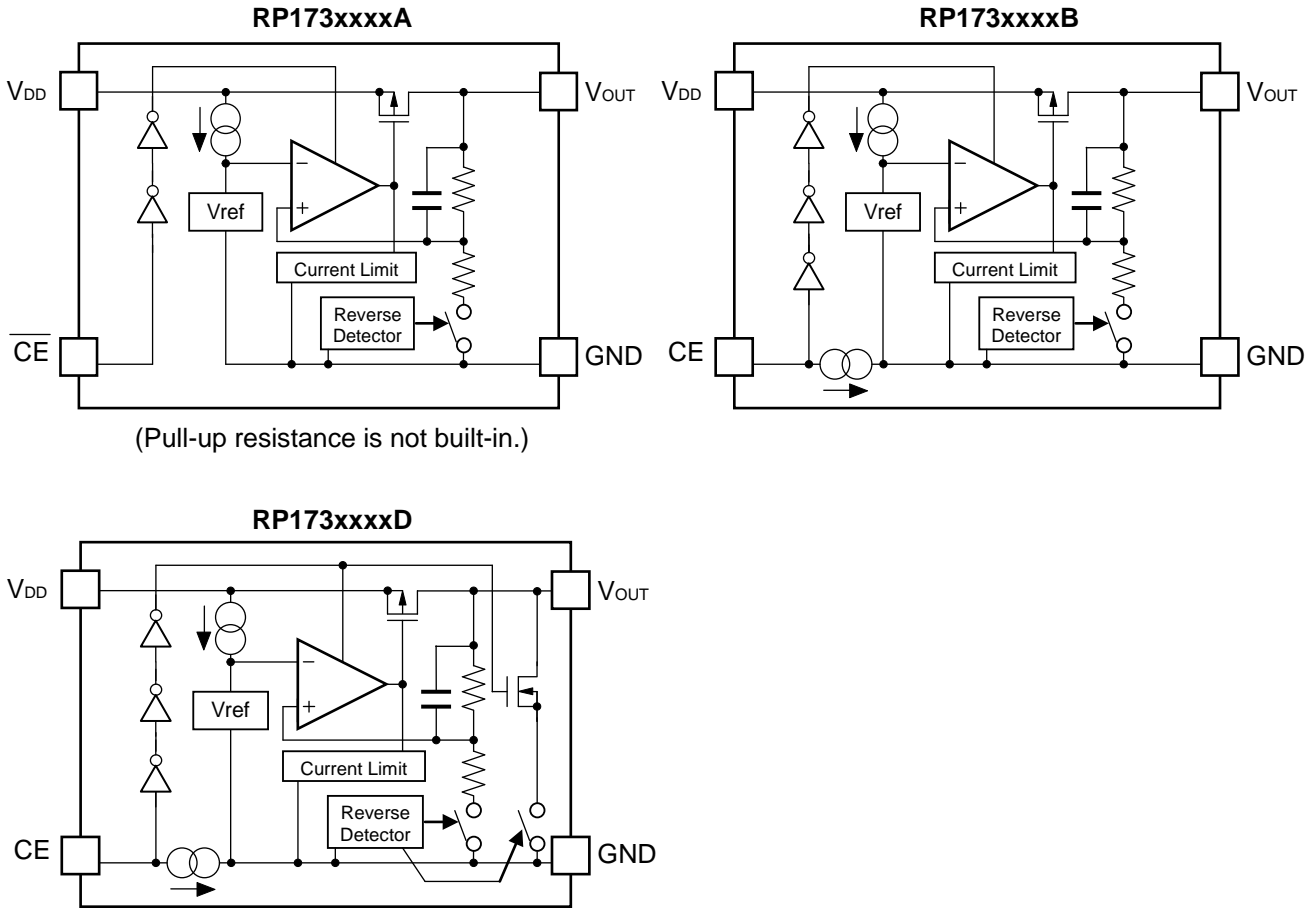

### FEATURES

- Output Current ..... Typ. 150mA
- Supply Current ..... Typ. 2.0 $\mu$ A
- Standby Current..... Typ. 0.2 $\mu$ A
- Input Voltage Range ..... 2.5V to Set  $V_{OUT}+6.5V$  (Max.11V)
- Output Voltage Range..... 1.2V to 5.5V (0.1V steps)  
(For other voltages, please refer to MARK INFORMATIONS.)
- Dropout Voltage ..... Typ. 0.13V (  $I_{OUT}=30mA$ ,  $V_{OUT}=3.0V$ )  
Typ. 0.90V (  $I_{OUT}=150mA$ ,  $V_{OUT}=3.0V$ )
- Output Voltage Accuracy.....  $\pm 1.0\%$ ( $1.5V < V_{OUT} \leq 5.5V$ ,  $T_{opt}=25^{\circ}C$ )
- Temperature-drift Coefficient of Output Voltage..... Typ.  $\pm 100ppm/^{\circ}C$
- Line Regulation ..... Typ. 0.02%/V
- Packages ..... DFN(PLP)1010-4, SC-88A, SOT-23-5
- Built-in Reverse Current Protection Circuit
- Short Current Limit..... Typ. 45mA
- Built-in Peak Current Limit Circuit
- Output capacitors ..... 0.1 $\mu$ F or more

### APPLICATIONS

- Power source for portable communication equipments.
- Power source for battery-powered equipments.
- Power source for electrical appliances such as cameras, VSRs and camcorders.
- Power source for digital home appliances.

## BLOCK DIAGRAMS

## SELECTION GUIDE

The output voltage, auto discharge function, package for the ICs can be selected at the user's request.

Product Name	Package	Quantity per Reel	Pb Free	Halogen Free
RP173Kxx1*-TR	DFN(PLP)1010-4	10,000 pcs	Yes	Yes
RP173Qxx2*-TR-FE	SC-88A	3,000 pcs	Yes	Yes
RP173Nxx1*-TR-FE	SOT-23-5	3,000 pcs	Yes	Yes

xx: The output voltage can be designated in the range of 1.2V (12) to 5.5V (55) in 0.1V steps.  
(For other voltages, please refer to MARK INFORMATIONS.)

\* : The auto discharge function at off state are options as follows.  
 (A) "L" active, without auto discharge function at off state (Pull-up resistance is not built-in.)  
 (B) "H" active, without auto discharge function at off state  
 (D) "H" active, with auto discharge function at off state

## PIN CONFIGURATIONS

### ● DFN(PLP)1010-4

### ● SC-88A

### ● SOT-23-5

## PIN DESCRIPTIONS

### ●DFN(PLP)1010-4

Pin No.	Symbol	Description
1	$V_{OUT}$	Output Pin
2	GND	Ground Pin
3	$\overline{CE}$ /CE	Chip Enable Pin
4	$V_{DD}$	Input Pin

\*) Tab is GND level. (They are connected to the reverse side of this IC.)  
The tab is better to be connected to the GND, but leaving it open is also acceptable.

### ●SC-88A

Pin No.	Symbol	Description
1	$\overline{CE}$ /CE	Chip Enable Pin
2 *	NC	No Connection
3	GND	Ground Pin
4	$V_{OUT}$	Output Pin
5	$V_{DD}$	Input Pin

\*) Pin No. 2 is connected to the bottom of the IC. It is recommended that the pin be connected to the ground plane on the board, or otherwise be left floating so that there is no contact with other potentials.

### ●SOT-23-5

Pin No.	Symbol	Description
1	$V_{DD}$	Input Pin
2	GND	Ground Pin
3	$\overline{CE}$ /CE	Chip Enable Pin
4	NC	No Connection
5	$V_{OUT}$	Output Pin

## ABSOLUTE MAXIMUM RATINGS

Symbol	Item	Rating	Unit
$V_{IN}$	Input Voltage	12	V
$V_{CE}$	Input Voltage (CE pin)	12	V
$V_{OUT}$	Output Voltage	-0.3 to 6.0	V
$I_{OUT}$	Output Current	165	mA
$P_D$	Power Dissipation (DFN(PLP)1010-4)*	400	mW
	Power Dissipation (SC-88A)*	380	
	Power Dissipation (SOT-23-5)*	420	
$T_{opt}$	Operating Temperature Range	-40 to +85	°C
$T_{stg}$	Storage Temperature Range	-55 to +125	°C

\*) For Power Dissipation, please refer to PACKAGE INFORMATION.

### ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause the permanent damages and may degrade the life time and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings is not assured.

## ELECTRICAL CHARACTERISTICS

Unless otherwise noted,  $V_{IN} = \text{Set } V_{OUT} + 1.0V (V_{OUT} > 1.5)$ ,  $I_{OUT} = 1\text{mA}$ ,  $C_{IN} = C_{OUT} = 0.1\mu\text{F}$ .  
The values in   are applicable under the condition of  $-40^{\circ}\text{C} \leq T_{opt} \leq 85^{\circ}\text{C}$ .

### ● RP173xxxxA

$T_{opt} = 25^{\circ}\text{C}$

Symbol	Item	Conditions	Min.	Typ.	Max.	Unit	
$V_{OUT}$	Output Voltage	$T_{opt} = 25^{\circ}\text{C}$	$V_{OUT} > 1.5\text{V}$	$\times 0.99$		$\times 1.01$	V

$R_{LOW}$	Autodischarge Nch Tr. ON Resistance (D Version only)	$V_{IN} = 7.0\text{V}$ , $V_{CE} = 0\text{V}$		380		$\Omega$	

The values in   have been tested and guaranteed by Design Engineering.

All of units are tested and specified under the pulse load conditions such that  $T_j \approx T_{opt} = 25^{\circ}\text{C}$  except for Ripple Rejection and Output Voltage Temperature Coefficient.

\*) The operation coverage of the Reverse Current Protection Circuit is  $V_{OUT} \geq 1.5\text{V}$ . However, under the condition of  $V_{IN} = V_{OUT} = 0\text{V}$ , always the Reverse Current Protection Circuit is operating.

• Dropout Voltage

$T_{opt}=25^{\circ}\text{C}$

Output Voltage $V_{OUT}$ (V)	Dropout Voltage $V_{DIF}$ (V)		
	Condition	Typ.	Max.
$1.2 \leq V_{OUT} < 1.3$	$I_{OUT}=150\text{mA}$	1.68	2.59
$1.3 \leq V_{OUT} < 1.5$		1.63	2.49
$1.5 \leq V_{OUT} < 1.8$		1.48	2.23
$1.8 \leq V_{OUT} < 2.3$		1.16	2.19
$2.3 \leq V_{OUT} < 3.0$		0.90	1.47
$3.0 \leq V_{OUT} < 4.0$		0.61	1.05
$4.0 \leq V_{OUT} \leq 5.5$		0.39	0.76

The values in  are applicable under the condition of  $-40^{\circ}\text{C} \leq T_{opt} \leq 85^{\circ}\text{C}$ .

**RECOMMENDED OPERATING CONDITIONS (ELECTRICAL CHARACTERISTICS)**

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if when they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

## TYPICAL APPLICATIONS

External Parts Example:

C2: Ceramic Capacitor 0.1 $\mu$ F, Murata, GRM155B31C104KA87D

## TECHNICAL NOTES

When using the ICs, please note the following points.

### Phase Compensation

In these ICs, phase compensation is made for securing stable operation even if the load current is varied. For this purpose, use a 0.1 $\mu$ F or more capacitor C2.

In case of using a tantalum capacitor, the output may be unstable due to inappropriate ESR. Therefore, the full range of operating conditions for the capacitor in the application should be considered.

### PCB Layout

Make  $V_{DD}$  and GND lines sufficient. If their impedance is high, noise pickup or unstable operation may result. Connect a capacitor C1 with a capacitance value as much as 0.1 $\mu$ F or more between  $V_{DD}$  and GND pin, and as close as possible to the pins.

Set external components, especially the output capacitor C2, as close as possible to the ICs, and make wiring as short as possible.

## POWER ACTIVATION

If the ICs are started up with  $V_{IN}$  and  $V_{CE}$  under the no-load condition, the both pin voltages have to be started up with faster than 2.0V/s. If the IC is started up with slower than 2.0V/s under the no-load condition, start up the IC only with  $V_{CE}$ .

## REVERSE CURRENT PROTECTION CIRCUIT

The RP173 Series include a Reverse Current Protection Circuit, which stops the reverse current from  $V_{OUT}$  pin to  $V_{DD}$  pin or to GND pin when  $V_{OUT}$  becomes higher than  $V_{IN}$ .

Usually, the LDO using Pch output transistor contains a parasitic diode between  $V_{DD}$  pin and  $V_{OUT}$  pin. Therefore, if  $V_{OUT}$  is higher than  $V_{IN}$ , the parasitic diode becomes forward direction. As a result, the current flows from  $V_{OUT}$  pin to  $V_{DD}$  pin.

The ICs of this series switches the mode to the reverse current protection mode before  $V_{IN}$  becomes lower than  $V_{OUT}$  by connecting the parasitic diode of Pch output transistor to the backward direction, and connecting the gate to  $V_{OUT}$  pin. As a result, the Pch output transistor is turned off and the all the current pathways from  $V_{OUT}$  pin to GND pin are shut down to maintain the reverse current lower than  $[I_{REV}]$  of the Electrical Characteristics.

Switching to either the normal mode or to the reverse current protection mode is determined by the magnitude of  $V_{IN}$  voltage and  $V_{OUT}$  voltage. For the stable operation, offset and hysteresis are set as the threshold. The detection/ release thresholds of both normal and reverse current protection modes are specified by  $[V_{REV\_DET}]$  and  $[V_{REV\_REL}]$  of the Electrical Characteristics. Therefore, the minimum dropout voltage under the small load current condition is restricted by the value of  $[V_{REV\_REL}]$ .

Fig.1 and Fig.2 show the diagrams of each mode, and Fig.3 shows the load characteristics of each mode. When giving the  $V_{OUT}$  pin a constant-voltage and decreasing the  $V_{IN}$  voltage, the dropout voltage will become lower than the  $[V_{REV\_DET}]$ . As a result, the reverse current protection starts to function to stop the load current. By increasing the dropout voltage higher than the  $[V_{REV\_REL}]$ , the protection mode will be released to let the load current to flow. If the dropout voltage to be used is lower than  $[V_{REV\_REL}]$ , the detection and the release may be repeated.

The operation coverage of the Reverse Current Protection Circuit is  $V_{OUT} \geq 1.5V$ . However, under the condition of  $V_{IN}=0V$ , always the reverse current protection mode is operating.

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to Ricoh sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without prior written consent of Ricoh.
3. Please be sure to take any necessary formalities under relevant laws or regulations before exporting or otherwise taking out of your country the products or the technical information described herein.
4. The technical information described in this document shows typical characteristics of and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under Ricoh's or any third party's intellectual property rights or any other rights.
5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death (aircraft, spacevehicle, nuclear reactor control system, traffic control system, automotive and transportation equipment, combustion equipment, safety devices, life support system etc.) should first contact us.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this document.
8. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
9. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
10. There can be variation in the marking when different AOI (Automated Optical Inspection) equipment is used. In the case of recognizing the marking characteristic with AOI, please contact Ricoh sales or our distributor before attempting to use AOI.
11. Please contact Ricoh sales representatives should you have any questions or comments concerning the products or the technical information.

**Ricoh is committed to reducing the environmental loading materials in electrical devices with a view to contributing to the protection of human health and the environment.**

Ricoh has been providing RoHS compliant products since April 1, 2006 and Halogen-free products since April 1, 2012.
