
Low Power/Fast MODE alternative 200mA LDO REGULATOR

NO.EA-279-170427

OUTLINE

The RP202x Series consist of CMOS-based voltage regulator ICs with high output voltage accuracy, low dropout voltage and low supply current. These ICs perform with the chip enable function and realize a standby mode with ultra low supply current. To prevent the destruction by over current, the current limit circuit is included. The RP202 Series have 3-mode. One is standby mode with CE pin. The other two are the fast response mode (Fast Mode) and the low power mode, and switch over automatically according to the load current of the LDO. Supply current of IC itself at light load is automatically reduced. The output voltage is maintained between Fast Mode and ECO Mode.

The RP202x consists of a voltage reference unit, an error amplifier, a resistor net for voltage setting, and a current limit circuit.

Since the packages for these ICs are SOT-23-5, SC-88A, and DFN(PLP)1010-4, high density mounting of the ICs on boards is possible.

FEATURES

- Input Voltage Range 1.4V to 5.25V
- Output Voltage Range 0.8V to 4.0V (0.1V steps)
(For other voltages, please refer to MARK INFORMATIONS.)
- Supply Current ($I_{OUT}=0mA$) Typ. 2.5 μA
- Supply Current ($I_{OUT}=10mA$) Typ. 50 μA
- Supply Current (Standby Mode) Typ. 0.1 μA
- Dropout Voltage Typ. 0.20V ($I_{OUT}=200mA$, $V_{OUT}=2.8V$)
- Ripple Rejection..... Typ. 70dB ($f=1kHz$, $V_{OUT}=2.8V$, $I_{OUT}=30mA$)
- Line Regulation Typ. 0.02%/V ($I_{OUT}=10mA$)
- Packages DFN(PLP)1010-4, SC-88A, SOT-23-5
- Built-in Foldback Protection Circuit..... Typ. 60mA (Current at short mode)
- Built-in Constant Slope Circuit (Soft-start Function)
- Ceramic capacitors are recommended to be used with this IC0.47 μF or more

APPLICATIONS

- Power source for portable communication equipment.
- Power source for electrical appliances such as cameras, VCRs and camcorders.
- Power source for battery-powered equipment.

SELECTION GUIDE

The output voltage, auto discharge function, and package, for the ICs can be selected at the user's request.

| Product Name | Package | Quantity per Reel | Pb Free | Halogen Free |
|------------------|----------------|-------------------|---------|--------------|
| RP202Kxx1*-TR | DFN(PLP)1010-4 | 10,000pcs | Yes | Yes |
| RP202Qxx2*-TR-FE | SC-88A | 3,000pcs | Yes | Yes |
| RP202Nxx1*-TR-FE | SOT-23-5 | 3,000pcs | Yes | Yes |

xx: The output voltage can be designated in the range from 0.8V(08) to 4.0V(40) in 0.1V steps.

* : The auto discharge function at off state are options as follows.
 (B) without auto discharge function at off state
 (D) with auto discharge function at off state

Auto-discharge function quickly lowers the output voltage to 0V, when the chip enable signal is switched from the active mode to the standby mode, by releasing the electrical charge accumulated in the external capacitor.

PIN CONFIGURATIONS

PIN DESCRIPTIONS

DFN(PLP)1010-4

| Pin No | Symbol | Pin Description |
|--------|-----------|------------------------------|
| 1 | V_{OUT} | Output Pin |
| 2 | GND | Ground Pin |
| 3 | CE | Chip Enable Pin ("H" Active) |
| 4 | V_{DD} | Input Pin |

* Tab is GND level. (They are connected to the reverse side of this IC.) The tab is better to be connected to the GND, but leaving it open is also acceptable.

SC-88A

| Pin No | Symbol | Pin Description |
|--------|-----------|------------------------------|
| 1 | CE | Chip Enable Pin ("H" Active) |
| 2 * | NC | No Connection |
| 3 | GND | Ground Pin |
| 4 | V_{OUT} | Output Pin |
| 5 | V_{DD} | Input Pin |

* Pin No. 2 is connected to the bottom of the IC. It is recommended that the pin be connected to the ground plane on the board, or otherwise be left floating so that there is no contact with other potentials.

SOT-23-5

| Pin No | Symbol | Pin Description |
|--------|-----------|------------------------------|
| 1 | V_{DD} | Input Pin |
| 2 | GND | Ground Pin |
| 3 | CE | Chip Enable Pin ("H" Active) |
| 4 | NC | No Connection |
| 5 | V_{OUT} | Output Pin |

ABSOLUTE MAXIMUM RATINGS

| V_{OUT} | Output Voltage | -0.3 to $V_{IN} + 0.3$ | V |
| I_{OUT} | Output Current | 220 | mA |
| P_D | Power Dissipation (DFN(PLP)1010-4) (Standard Test Land Pattern) * | 400 | mW |
| | Power Dissipation (SC-88A) (Standard Test Land Pattern) * | 380 | |
| | Power Dissipation (SOT-23-5) (Standard Test Land Pattern) * | 420 | |
| T_a | Operating Temperature Range | -40 to 85 | °C |
| T_{stg} | Storage Temperature Range | -55 to 125 | °C |

*) For Power Dissipation, please refer to PACKAGE INFORMATION.

ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause the permanent damages and may degrade the life time and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings is not assured.

RECOMMENDED OPERATING CONDITIONS (ELECTRICAL CHARACTERISTICS)

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if when they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

TYPICAL APPLICATION

(External Components)

C1, C2 : Ceramic Capacitor 0.47 μ F MURATA: GRM155B31A474KE14

TECHNICAL NOTES

When using these ICs, consider the following points:

Phase Compensation

In these ICs, phase compensation is made for securing stable operation even if the load current is varied. For this purpose, use a capacitor C2 with 0.47 μ F or more and good ESR (Equivalent Series Resistance).

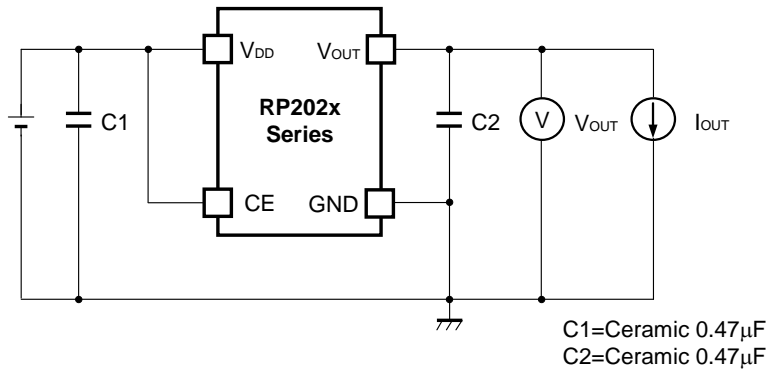

(Note: If additional ceramic capacitors are connected with parallel to the output pin with an output capacitor for phase compensation, the operation might be unstable. Because of this, test these ICs with as same external components as ones to be used on the PCB.)

PCB Layout

The impedances of V_{DD} line and GND line has to be low as possible. The high impedances may result in the unstable operation or a noise pickup. The output capacitor with 0.47 μ F or more should be placed between V_{DD} and GND. The line from V_{DD} to the output capacitor, and the line from the output capacitor to GND must be wired as short as possible.

The output capacitor is placed between V_{OUT} and GND as phase compensation. The line from V_{OUT} to the output capacitor, and the line from the capacitor to GND must be wired as short as possible. Please refer to the "Basic Test Circuit" below.

5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death (aircraft, spacevehicle, nuclear reactor control system, traffic control system, automotive and transportation equipment, combustion equipment, safety devices, life support system etc.) should first contact us.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this document.
8. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
9. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
10. There can be variation in the marking when different AOI (Automated Optical Inspection) equipment is used. In the case of recognizing the marking characteristic with AOI, please contact Ricoh sales or our distributor before attempting to use AOI.
11. Please contact Ricoh sales representatives should you have any questions or comments concerning the products or the technical information.

Ricoh is committed to reducing the environmental loading materials in electrical devices with a view to contributing to the protection of human health and the environment.

Ricoh has been providing RoHS compliant products since April 1, 2006 and Halogen-free products since April 1, 2012.
