

## OUTLINE

The R1250Vxx1A Series are CMOS-based negative output charge pump regulator ICs, which can be developed as local power suppliers for portable appliances and small electric appliances used with batteries, with low supply current.

Each of these ICs consists of an oscillator, a control circuit, a reference voltage unit, an error amplifier, and an output driver circuit. The R1250Vxx1A can easily supply negative voltage, or regulated setting output voltage in the range from -2V to -4V from positive input voltage.

The chip enable function works to shut down the internal circuit and reduces supply current at the stand-by mode, therefore the R1250Vxx1A is very suitable for the application such as portable systems that require low supply current.

Since the package for this IC is TSSOP8 package (TSOP8 in EIAJ standard), high density mounting of the ICs on board is possible.

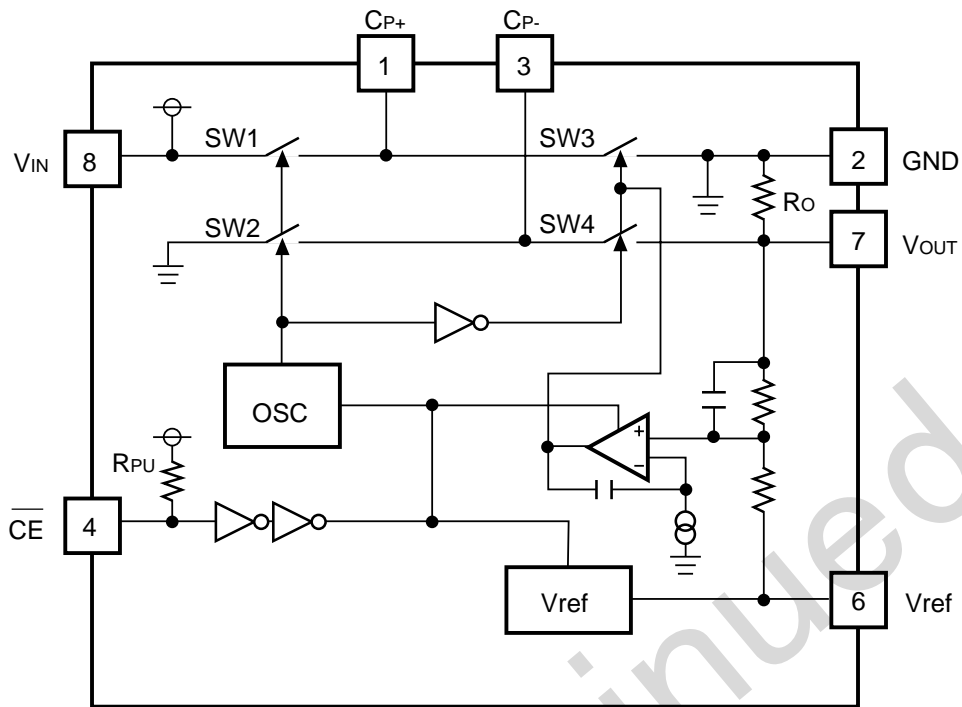

## FEATURES

- Output Current..... 100mA (Max. at  $V_{IN}=5.0V$ ,  $C_{IN}=C_P=C_{OUT}=4.7\mu F$ , Set Output Voltage=-3.0V)
- Output Voltage Accuracy.....  $\pm 3.0\%$  ( $V_{IN}=5.0V$ ,  $C_{IN}=C_P=C_{OUT}=4.7\mu F$ , Set Output Voltage=-3.0V,  $I_{OUT}=0mA/10mA$ )  
 $\pm 9.0\%$  ( $V_{IN}=5.0V$ ,  $C_{IN}=C_P=C_{OUT}=4.7\mu F$ , Set Output Voltage=-3.0V,  $I_{OUT}=50mA$ )
- Output Voltage..... Stepwise setting with a step of 0.1V in the range from -2.0V to -4.0V is possible.
- Range of Input Voltage.....  $|V_{OUT}|V$  to +5.5V (Set Output Voltage=-4.0V to -2.8V)  
+2.7V to +5.5V (Set Output Voltage=-2.7V to -2.0V)
- Oscillator Frequency ..... Typ. 280kHz
- Chip Enable Function (Active at "L")
- Package ..... TSSOP8

## APPLICATIONS

- Power source for Disk Drives.
- Power source for hand-held communication equipment and battery-powered equipment.
- Power source for PC peripherals and ADD-ON cards.
- Power source for portable audio-visual appliances such as cameras.
- Local power source for small electrical appliances.

### BLOCK DIAGRAM

### PIN CONFIGURATION

### PACKAGE DIMENSION

## PIN DESCRIPTION

Pin No.	Symbol	Description
1	C <sub>P+</sub>	C <sub>P</sub> (Capacitor for Charge Pump) Positive Power Supply Pin
2	GND	Ground Pin
3	C <sub>P-</sub>	C <sub>P</sub> (Capacitor for Charge Pump) Negative Power Supply Pin
4	$\overline{\text{CE}}$	Chip Enable Pin (active at "L")
5	NC	No Connection Pin
6	V <sub>ref</sub>	Output Pin for Reference Voltage <sup>(*Note1)</sup>
7	V <sub>OUT</sub>	Output Pin for Negative Regulator
8	V <sub>IN</sub>	Power Supply Pin

\*Note1 V<sub>ref</sub> is just a monitoring pin, therefore remain open. Do not connect any load. Refer to Technical Notes.

## ABSOLUTE MAXIMUM RATINGS

(GND=0V)

Symbol	Item	Rating	Unit
V <sub>IN</sub>	V <sub>IN</sub> Supply Voltage	-0.3 to 7.5	V
V <sub>CE</sub>	$\overline{\text{CE}}$ Pin Input Voltage	-0.3 to V <sub>IN</sub> +0.3	V
V <sub>P+</sub>	C <sub>P+</sub> Pin Input Voltage	-0.3 to V <sub>IN</sub> +0.3	V
V <sub>ref</sub>	V <sub>ref</sub> Pin Voltage	-0.3 to V <sub>IN</sub> +0.3	V
V <sub>P-</sub>	C <sub>P-</sub> Pin Input Voltage	V <sub>IN</sub> -12 to +0.3	V
V <sub>OUT</sub>	V <sub>OUT</sub> Pin Voltage	V <sub>IN</sub> -12 to +0.3	V
I <sub>OUT</sub>	Output Current	200	mA
P <sub>D</sub>	Power Dissipation <sup>*Note1</sup>	490	mW
T <sub>opt</sub>	Operating Temperature Range	-40 to +85	°C
T <sub>stg</sub>	Storage Temperature Range	-55 to +125	°C

\*Note1: Power dissipation is specified under the specified condition.

Conditions;

Evaluation Board Dimensions: 50mm × 50mm × 1.6mm

Material: Glass Epoxy (FR-4)

Reverse side of the evaluation board: Plane Copper

Surface of the evaluation board: Land pattern and Wiring

## SELECTION GUIDE

The output voltage and the active type for the ICs can be selected at the user's request.

The selection can be made with designating the part number as shown below;

R1250Vxx1A-xx  
  ↑ ↑ ↑  
  a b c

Code	Contents
a	Setting Output Voltage xx: The absolute value of Output Voltage Stepwise setting with a step of 0.1V in the range of -2.0V to -4.0V is possible.
b	Designation of Active Type of the Chip Enable Circuit: A (fixed) : "L" active type
c	Designation of Packing Type E2 : E2 1reel=2000pcs

Discontinued

## ELECTRICAL CHARACTERISTICS

R1250Vxx1A

(Unless otherwise provided,  $V_{IN}=5.0V$ ,  $T_{opt}=25^{\circ}C$ ,  $C_P$ ,  $C_{OUT}$  = Ceramic  $4.7\mu F$ )

Symbol	Item	Conditions	Min.	Typ.	Max.	Unit	
$V_{IN}$	Operating Input Voltage	Set Output Voltage = -2.7V to -2.0V	2.7		5.5	V	
		Set Output Voltage = -4.0V to -2.8V	Set $V_{OUT}$				
$I_{SS}$	Supply Current	Operation: Active, for IC itself *Note1	-2.4V to -2.0V		1.50	2.30	mA
			-2.9V to -2.5V		1.60	2.55	
			-3.4V to -3.0V		1.70	2.75	
			-4.0V to -3.5V		1.80	3.00	
$I_{STB}$	Shut-down Current	Operation: Shut-down, for IC itself *Note2		0.1	1.0	$\mu A$	
$V_{OUT}$	Output Voltage	$I_{OUT}=0mA/10mA$	-2.4V to -2.0V	$\times 0.95$		$\times 1.05$	V
			-2.9V to -2.5V	$\times 0.96$		$\times 1.04$	
			-3.4V to -3.0V	$\times 0.97$		$\times 1.03$	
			-4.0V to -3.5V	$\times 0.97$		$\times 1.03$	
		$I_{OUT}=50mA$	-2.4V to -2.0V	$\times 0.88$		$\times 1.12$	
		$I_{OUT}=75mA$	-2.9V to -2.5V	$\times 0.89$		$\times 1.11$	
			-3.4V to -3.0V	$\times 0.91$		$\times 1.09$	
			-4.0V to -3.5V	$\times 0.92$		$\times 1.08$	
$V_{ref}$	Reference Voltage *Note3	No load		$V_{OUT}$		V	
$\Delta V_{OUT}/\Delta I_{OUT}$	Load Regulation	$I_{OUT}=10mA$ to 50mA	-2.4V to -2.0V		0.7	mV/ mA	
		$I_{OUT}=10mA$ to 75mA	-4.0V to -2.5V				
fosc	Oscillator Frequency	Output Frequency	238	280	322	kHz	
$\Delta f_{osc}/\Delta T$	Oscillator Frequency Temperature Coefficient			$\pm 0.25$		kHz/ $^{\circ}C$	
Duty	Oscillator Duty Cycle	At no Load		50		%	
$V_{SDH}$	CE "H" Input Voltage		1.5			V	
$V_{SDL}$	CE "L" Input Voltage				0.25	V	
$R_{PU}$	CE Pull-up Resistance		0.68	1.25	3.00	M $\Omega$	
$R_O$	Resistance between $V_{OUT}$ and GND			5		k $\Omega$	

\*Note1 Refer to Test Circuit 1.

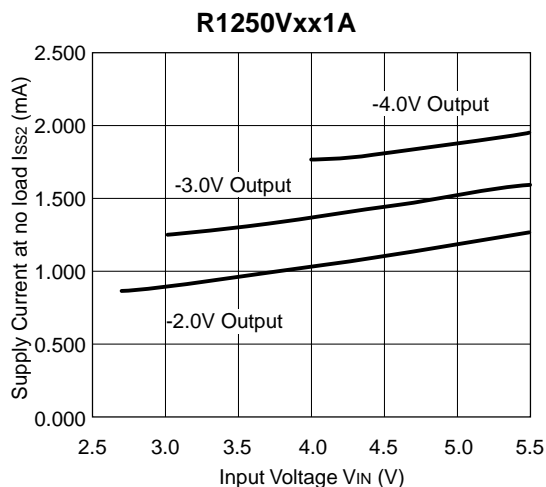

\*Note2: Refer to Test Circuit 6.

\*Note3: Do not connect ant load. Refer to Technical Notes.

\*Use Ceramic Capacitors with low ESR. Capacitors with high ESR could have bad effect on the performance of this IC.

## TYPICAL CHARACTERISTICS

1) Supply Current at no load vs. Input Voltage

2) Supply Current at no load vs. Temperature

3) Input Current vs. Output Load Current

4) Efficiency vs. Load Current

5) Oscillator Frequency vs. Input Voltage

6) Oscillator Frequency vs. Temperature

7) Output Voltage vs. Output Load Current

8) Output Voltage vs. Temperature

9) Output Voltage Waveform

Unless otherwise provided, conditions are as follows;

Sample: R1250V301A

$V_{IN}=5.0V$

$C_{IN}=C_P=C_{OUT}=4.7\mu F$

$I_{OUT}=0mA$

$BW=20MHz$

 $I_{OUT}=10mA$ 

 $I_{OUT}=50mA$ 

## TEST CIRCUITS

- Test Circuit 1) Supply Current 1
- Test Circuit 2) Typical Characteristics 1), 2)
- Test Circuit 3) Typical Characteristics 3), 4), 7), 8)
- Test Circuit 4) Typical Characteristics 5), 6)
- Test Circuit 5) Typical Characteristics 9)
- Test Circuit 6) Standby Current

### 1) Test Circuit 1

<Definition>  $I_{SS1}=I_{SS-P}+I_{SS-N}$

(\*) To stabilize voltage, a few  $\mu F$  bypass capacitors are applied to  $V_{OUT}$  pin and  $V_{IN}$  pin.

2) Test Circuit 2

3) Test Circuit 3

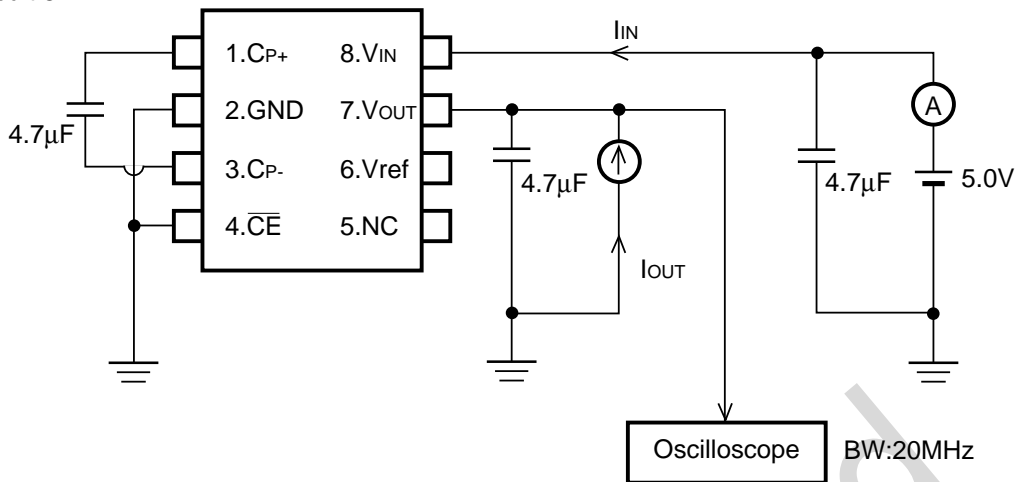

<Definition>  $\eta (|V_{OUT}| \times I_{OUT}) / (V_{IN} \times I_{IN}) \times 100(\%)$

4) Test Circuit 4

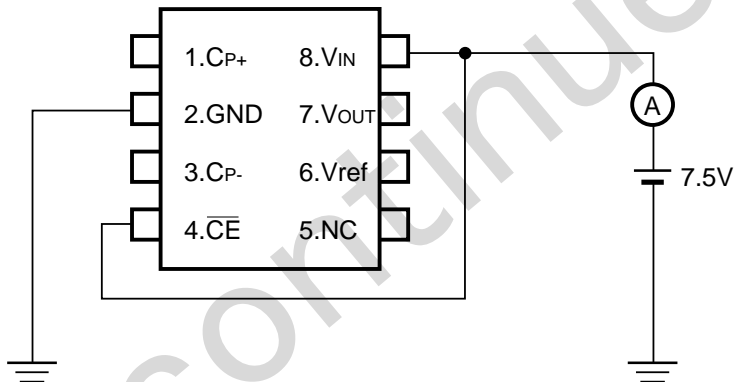

(\*) To stabilize voltage, a few  $\mu F$  bypass capacitor is applied to  $V_{IN}$  pin.

5) Test Circuit 5

6) Test Circuit 6

### TYPICAL APPLICATION

(\*) Vref pin should not be wired. Refer to Technical Notes.

## OPERATION

### 1) Basic Operation

The R1250Vxx1A Series make SW1 through SW4 ON and OFF by the clock generated by internal oscillator (OSC) with fixed frequency, and operate as a inverting charge pump with the capacitor  $C_P$  and the capacitor  $C_{OUT}$ .

The Output Voltage is feedback and the voltage between the Output Voltage and Reference Voltage ( $V_{ref} = |V_{OUT}|$ ) is divided half, and it is compared with the GND (=0V) level by an internal operational amplifier.

By this action, the impedance of SW3 is controlled to correspond with its load current and Output Voltage keeps “Set  $V_{OUT}$ ” level.

### 2) Status of Internal Circuits at Standby mode and Standby Current

At Standby mode, R1250V Series keep the voltage of  $C_P$  as shown below:

When you design a system with using this IC, consider the following subjects;

- 2-(1) If very small leakage current would be a critical, the leakage current of both  $C_{IN}$  and  $C_P$  should be considered.
- 2-(2) Because the voltage level of  $C_P$  keeps as much as  $V_{DD}$  level, the speed for start-up from stand-by mode is faster than the start-up by power-on.
- 2-(3)  $V_{OUT}$  is internally pulled down through 5kΩ to GND. Time constant “ $\tau$ ” of transient response (turn-off speed) of  $V_{OUT}$  can be calculated as follows:  

$$\tau \cong (5[k\Omega] \parallel R_{OUT}) \times C_{OUT}$$
 ( $R_{OUT}$ : Output load resistance)
- 2-(4) Load current should be OFF synchronously with this IC if the load is electronic or connected between  $V_{IN}$  and  $V_{OUT}$ . If some charge is continuously flown to the Output  $V_{OUT}$  at the “OFF” state, the voltage level of  $V_{OUT}$  will rise and could be beyond 0V. And if the voltage will be +0.3V (that is designated as absolute maximum rating.), this IC might be break down.

### 3) Ripple Voltage

Ripple voltage of Output waveform can be roughly calculated as follows:

$$V_{ripple} [mVp-p] \cong 0.5 \times (I_{OUT} [mA] + \text{Supply Current at no load} [mA]) / (\text{Oscillator Frequency: } 280000 [Hz]) / C_{OUT} [F]$$

$$\text{Supply Current at no load} [mA] \cong \text{Supply Current 1} [mA]$$

#### 4) Power Consumption

Power Consumption at large load current of this IC can be calculated as follows:

$$W_{\text{chip}} [\text{mW}] \cong (V_{\text{IN}} [\text{V}] - \text{Set Output Voltage } [V]) \times (I_{\text{OUT}} [\text{mA}])$$

## TECHNICAL NOTES

To use this IC, the following things should be considered.

- 1) Short Protection function for each pin is not included in this IC.
- 2) Use capacitors with low equivalent series resistor (ESR) for  $C_{\text{IN}}$ ,  $C_{\text{P}}$ ,  $C_{\text{OUT}}$  pins. Capacitors with large ESR make this IC's performance worse.
- 3) Make wiring of GND,  $V_{\text{IN}}$ ,  $C_{\text{P}+}$ ,  $C_{\text{P}}$  secure enough and decrease impedance. High impedance could be a cause of unstable operation of this IC.
- 4) When this IC is used with large load current, consider its radiation of heat.
- 5) Basically, Vref pin can be used for soldering to the mount pad of PCB. Do not make it wiring.
- 6) Load type is electronic or setting between  $V_{\text{IN}}$  and  $V_{\text{OUT}}$ , in cases of OFF-state of this IC and start-up state of this IC, make sure not to raise  $V_{\text{OUT}}$  level on positive voltage side. If the voltage level is beyond +0.3V, which is designated as the absolute maximum rating, this IC could be broken.

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to Ricoh sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without prior written consent of Ricoh.
3. Please be sure to take any necessary formalities under relevant laws or regulations before exporting or otherwise taking out of your country the products or the technical information described herein.
4. The technical information described in this document shows typical characteristics of and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under Ricoh's or any third party's intellectual property rights or any other rights.
5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death (aircraft, spacevehicle, nuclear reactor control system, traffic control system, automotive and transportation equipment, combustion equipment, safety devices, life support system etc.) should first contact us.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this document.
8. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
9. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
10. There can be variation in the marking when different AOI (Automated Optical Inspection) equipment is used. In the case of recognizing the marking characteristic with AOI, please contact Ricoh sales or our distributor before attempting to use AOI.
11. Please contact Ricoh sales representatives should you have any questions or comments concerning the products or the technical information.

**Ricoh is committed to reducing the environmental loading materials in electrical devices with a view to contributing to the protection of human health and the environment.**

Ricoh has been providing RoHS compliant products since April 1, 2006 and Halogen-free products since April 1, 2012.
