OUTLINE

The RP200x Series consist of CMOS-based voltage regulator ICs with high output voltage accuracy, low dropout voltage and low supply current. These ICs perform with the chip enable function and realize a standby mode with ultra low supply current. To prevent the destruction by over current, the current limit circuit is included. The RP200x Series have 3-mode. One is standby mode with CE pin. Other two modes are realized with ECO Function. Fast Response Mode (Fast Mode) and Fast and Low Power auto-change Mode (Auto ECO Mode) are alternative with Auto Eco pin (AE pin). Supply current of IC itself at light load is automatically reduced at Auto ECO Mode compared with Fast Mode. The output voltage is maintained between Fast Mode and Auto ECO Mode. Without AE pin type is also available. It is an LDO regulator with Auto ECO mode. (RP200Z in WLCSP.)

Since the packages for these ICs are SOT-23-5, SC-88A, thin DFN(PLP)1212-6, and WLCSP-4-P5, high density mounting of the ICs on boards is possible. RP200Q (SC-88A), RP200K (DFN(PLP)1212-6) and RP200N (SOT-23-5) has AE pin, then if the AE pin is "H", Fast Mode is available. If the AE pin is set at "L" level, Auto ECO Mode operation is available.

FEATURES

- Supply Current (Low power Mode) ...................... Typ. 1.0µA (V_{OUT} \leq 1.85V)
- Supply Current (Fast Mode) ............................ Typ. 55µA
- Supply Current (Standby Mode) ...................... Typ. 0.1 µA
- Ripple Rejection ........................................ Typ. 70dB (f=1kHz)
- Input Voltage Range .................................. 1.4V to 5.25V
- Output Voltage Range .................................. 0.8V to 4.0V (0.1V steps)
- Output Voltage Accuracy ............................... ±1.0% (V_{OUT} > 2.0V, T_{OP} = 25°C)
- Temperature-Drift Coefficient of Output Voltage .... Typ. ±50ppm/°C
- Dropout Voltage ........................................ Typ. 0.23V (I_{OUT}=300mA, V_{OUT}=2.8V)
- Line Regulation ......................................... Typ. 0.02%/V
- Packages ............................................... WLCSP-4-P5, DFN(PLP)1212-6, SC-88A, SOT-23-5
- Built-in Fold Back Protection Circuit ..................... Typ. 50mA (Current at short mode)
- Ceramic capacitors are recommended .............. 1.0µF

APPLICATIONS

- Power source for portable communication equipment.
- Power source for electrical appliances such as cameras, VCRs and camcorders.
- Power source for battery-powered equipment.
RP200K/N/QxxxB

RP200Zxx1B

RP200K/N/QxxxD

RP200Zxx1D

RP200Q (SC-88A) is the discontinued product as of January 2017.
RP200Z (WLCSP-4-P5) is the non-promotional product as of March 2019.
**SELECTION GUIDE**

The output voltage, auto discharge function, and package, etc. for the ICs can be selected at the user’s request.

*) For Power Dissipation, please refer to PACKAGE INFORMATION.

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause the permanent damages and may degrade the life time and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings is not assured.
**ELECTRICAL CHARACTERISTICS**

\( V_{\text{IN}} = \text{Set } V_{\text{OUT}} + 1\text{V}, I_{\text{OUT}} = 1\text{mA}, C_{\text{IN}} = C_{\text{OUT}} = 1\mu\text{F}, \text{ unless otherwise noted.} \)

The specification in [ ] is checked and guaranteed by design engineering at \(-40^\circ\text{C} \leq T_{\text{opt}} \leq 85^\circ\text{C}.\)

\(^*\) RP200Q (SC-88A) is the discontinued product as of January 2017. RP200Z (WLCSP-4-P5) is the non-promotional product as of March 2019.
### Symbol | Item | Conditions | Min. | Typ. | Max. | Unit
--- | --- | --- | --- | --- | --- | ---

| V\_CEL | CE Input Voltage "L" | | | | 0.4 | V
| I\_AEPD | AE Pull-down Constant Current\(^3\) | | 0.1 | | | \(\mu\)A

| V\_AEH | AE Input Voltage "H"\(^3\) | | 1.0 | | | V
| V\_AEL | AE Input Voltage "L"\(^3\) | | 0.4 | | | V

| R\_LOW | Low Output Nch Tr. ON Resistance (of D version) | \(V\_IN=4.0\text{V}, V\_CE=0\text{V}\) | 50 | | | \(\Omega\)

All of units are tested and specified under load conditions such that \(T_j=T_{\text{opt}}=25^\circ\text{C}\) except for Ripple Rejection, Output Voltage Temperature Coefficient.

\(^1\) The value of supply current is excluding the Pull-down constant current of CE Pin and AE Pin.

\(^2\) The maximum Input Voltage of the ELECTRICAL CHARACTERISTICS is 5.25V. In case of exceeding this specification, the IC must be operated on condition that the Input Voltage is up to 5.5V and the total operating time is within 500hrs.

\(^3\) Applied to RP200K/N/Q

### RECOMMENDED OPERATING CONDITIONS  (ELECTRICAL CHARACTERISTICS)

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if when they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.
TYPICAL APPLICATION

(External Components)
C1, C2 : Ceramic Capacitor 1.0µF MURATA: GRM155B31A105KE15

TECHNICAL NOTES

When using these ICs, consider the following points:

Phase Compensation

In these ICs, phase compensation is made for securing stable operation even if the load current is varied. For this purpose, use a capacitor C2 with 1.0µF or more and good ESR (Equivalent Series Resistance).
(Note: If additional ceramic capacitors are connected with parallel to the output pin with an output capacitor for phase compensation, the operation might be unstable. Because of this, test these ICs with as same external components as ones to be used on the PCB.)

PCB Layout

Make VDD and GND lines sufficient. If their impedance is high, noise pickup or unstable operation may result. Connect a capacitor C1 with a capacitance value as much as 1.0µF or more between VDD and GND pin, and as close as possible to the pins.

Set external components, especially the output capacitor C2, as close as possible to the ICs, and make wiring as short as possible.

Impedance of Input Pin (CE Pin and AE Pin)

In those ICs, there is a pull-down constant current in the CE Pin and the AE Pin. However, if those pins are floating and wired long that produce the noise environment, it might miss-operation of ICs. For this purpose, please make sure enough evaluation of ICs.

  - Output Voltage $V_{OUT}$ for different $I_{OUT}$ values:
    - $I_{OUT}=0mA$
    - $I_{OUT}=1mA$
    - $I_{OUT}=30mA$
    - $I_{OUT}=100mA$
ESR vs. Output Current

Ceramic type output capacitor is recommended for this series; however, the other output capacitors with low ESR also can be used. The relations between $I_{OUT}$ (Output Current) and ESR of an output capacitor are shown below. The conditions when the white noise level is under 40$\mu$V (Avg.) are marked as the hatched area in the graph.

**Measurement conditions**

- Frequency Band: 10Hz to 2MHz
- Temperature: $-40^\circ$C to 85$^\circ$C
- $C_1, C_2$: 1.0$\mu$F

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to Ricoh sales representatives for the latest information thereon.

2. The materials in this document may not be copied or otherwise reproduced in whole or in part without prior written consent of Ricoh.

3. Please be sure to take any necessary formalities under relevant laws or regulations before exporting or otherwise taking out of your country the products or the technical information described herein.

4. The technical information described in this document shows typical characteristics of and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under Ricoh’s or any third party’s intellectual property rights or any other rights.

5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death (aircraft, spacevehicle, nuclear reactor control system, traffic control system, automotive and transportation equipment, combustion equipment, safety devices, life support system etc.) should first contact us.

6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.

7. Anti-radiation design is not implemented in the products described in this document.

8. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.

9. WL CSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.

10. There can be variation in the marking when different AOI (Automated Optical Inspection) equipment is used. In the case of recognizing the marking characteristic with AOI, please contact Ricoh sales or our distributor before attempting to use AOI.

11. Please contact Ricoh sales representatives should you have any questions or comments concerning the products or the technical information.

Ricoh is committed to reducing the environmental loading materials in electrical devices with a view to contributing to the protection of human health and the environment.
Ricoh has been providing RoHS compliant products since April 1, 2006 and Halogen-free products since April 1, 2012.
